How have we tried to change the assessment culture?

Assessment should be viewed as a part of the learning environment

This is what our learning environment looks like:

Extreme Apprenticeship (XA)

- Students participate in **activities that resemble those of experts**
- Based on Cognitive Apprenticeship (Collins et al., 1991)

Extreme Apprenticeship (XA)

The methods scales up to courses with hundreds of students

**Collaborative drop-in
sessions several days a
week**

Tutor

Tutors are undergraduate/graduate students

Guide by asking questions

Model how experts work

The learning space is in the main hallway of the department

Tutor

Group of students

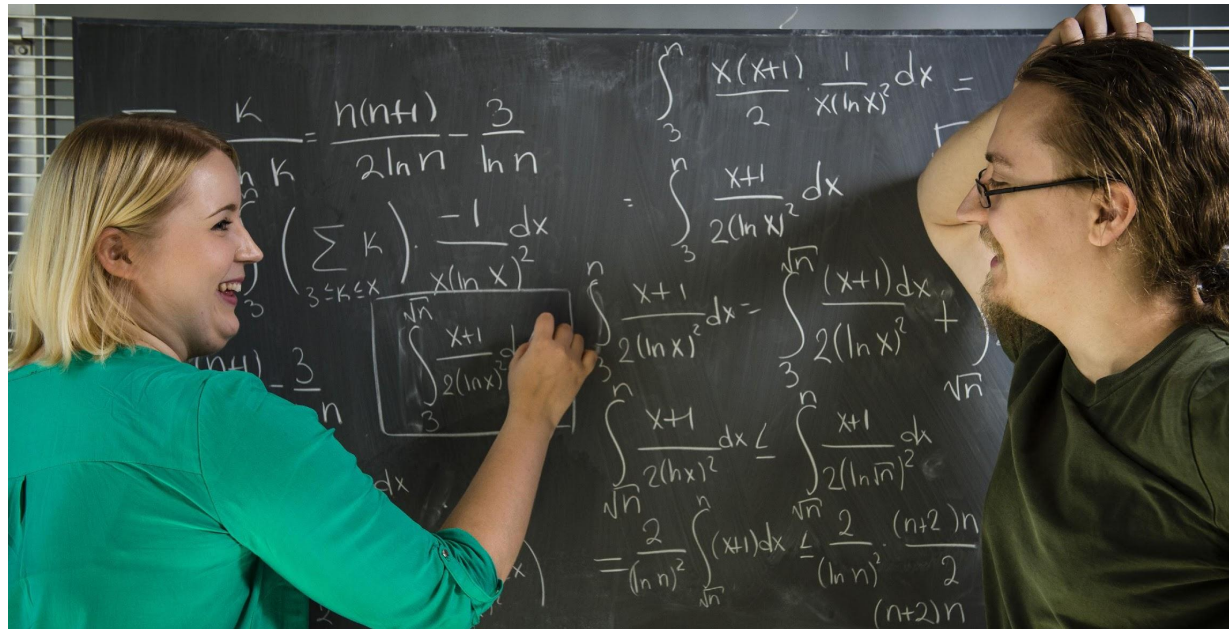

Professor

**Mathematical
community made
visible and
accessible to
both students
and professors**

**You can
draw on all
surfaces**

Results

Compared to traditional lecture-based teaching, the XA method supports **a better quality of learning**

- Students feel more competent
- More deep learning
- Less memorisation and fragmented learning

Lahdenperä, J., Postareff, L., & Rämö, J. (2019). Supporting Quality of Learning in University Mathematics: a Comparison of Two Instructional Designs

Self-assessment is done with the support of a rubric

	Prerequisites	1-2	3-4	5
Quotient structures	I can determine the cosets (sivuluokat) of a subgroup.	I can calculate with cosets. I can, for example, determine the elements of the quotient group $S_4/\langle(1234)\rangle$. I can also determine the elements of the subgroup generated by $(12)\langle(1234)\rangle$.	I calculate with cosets fluently.	I can deduce the definitions of normal subgroup and ideal from the concept of binary operation compatible with an equivalence relation.
	I can view a quotient group (tekijäryhmä) as a group and handle its elements like in any other group (e.g. determine inverse elements and powers).			
	I know how normal subgroups and quotient groups are related.	I can determine elements of a quotient ring.	I know why the equivalence relation needs to be compatible with a binary operation when defining a binary operation for equivalence classes.	
		I know how ideals and quotient rings		

Content knowledge

Mathematical discussion and collaboration

I can formulate precise questions when I do not understand something.

I can talk about mathematics to other people.

I present my solutions to other people.

I take part in mathematical discussions with my peers.

If I do not understand what other people say, I ask them to explain it again.

I collaborate with other people, listen to them and share my ideas with them.

When talking to others about my mathematical thinking, I try to concentrate on the main ideas instead of technicalities.

I give feedback to others when their solutions are discussed.

When collaborating with others, I listen to other people's ideas, try to understand them and use them in our collaboration.

I can summarise my solutions clearly, briefly and precisely.

I give constructive feedback to others so that they can improve their work. I can find something positive and meaningful to say in other people's work.

When discussing with other people I can take their position and feelings into consideration. I try to make the conversations meaningful to all parties.

Concluding remarks

- Self-assessment skills are important in life. Students need to have an opportunity to **practice** them
- Also the students should have **ownership** over their assessment, not only the teacher
- If we only use teacher-led evaluation, it can solidify students' belief that they are not capable of assessing their own learning
